DRAWING BOT WORKSHOP

Join us for a free Online After School Club: Drawing Bot Workshop, run by Unit Lab, where you will make your own drawing machines. You will build a drawing bot using pens, motors and simple electronics, before using Arduino programming software to control the sketches that the bots are drawing. We will cover the basics of electronics and Arduino programming.

There is no previous experience needed to take part in this workshop. This is an opportunity for 15 state school students (age 15-18). Supported by UCL's Widening Participation.
